Members with Multiple Utilities under 1 code

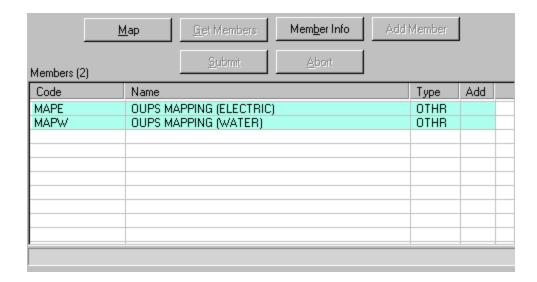

There are several members that have multiple utilities under 1 member code. To properly respond to + response we had to come up with a solution that would allow a member to respond to each of their utilities. This solution will allow for this, without additional cost. There will now be a main delivery code, the code you currently use, and show codes, codes that you will post responses. Below is an example of this and how you would post responses via the internet.

Main Delivery code – MAP

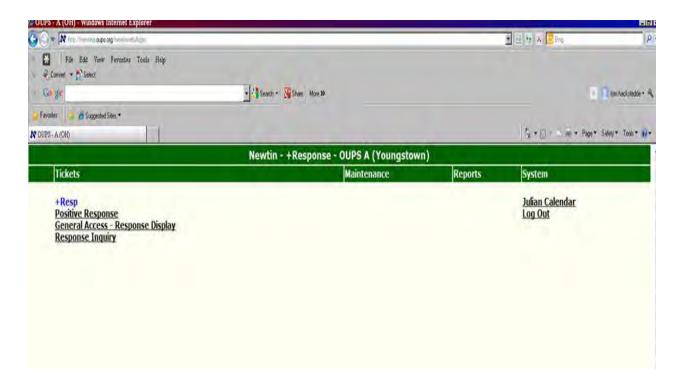

Show codes – MAPE (Electric)

MAPW (Water)

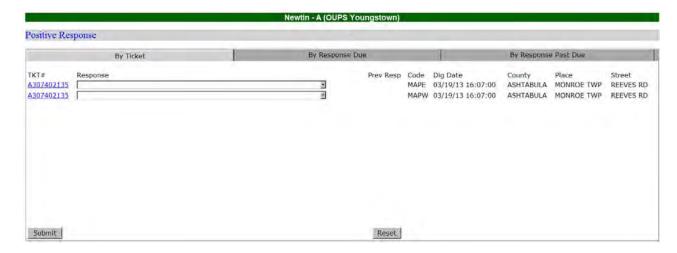

Ticket A307402135 is created and delivered to the MAP database. The show members on the ticket will be the codes that need responses posted.

Once you hit the website, http://newtin.oups.org, you will enter your username/password. From this point you will be at the following screen. Click on Positive Response

Once on this screen you will click on the "By ticket" tab. Enter the ticket # and submit.

If you have not signed up to post responses you can email <a>IT@oups.org and we will contact you to get setup.
